

The lifeblood of every power plant is water.

Think about ITT.

ITT pumps, valves, monitoring systems, and control equipment keep water moving in every phase of the power generation cycle. You'll find them at work in coal, natural gas, hydroelectric, geothermal, solar, and nuclear power plants around the world. And every one is designed to perform flawlessly while lowering the total cost of ownership. For more information on how we keep power plants—and the planet—moving, visit ittpowergen.com or call 1-800-734-7867.
